

**Introduction** is too big .... It should be short with respect to the length of report.

Background is good which is providing best overview about breast cancer classifications. It shows clear understanding.

## **Min part:**

Main part is also good which is describing the methodology, design of development and the system architecture.

## **Experimental Results and Analysis:**

Please put some more efforts on the critical evaluation and discussions of the performance of your model. You are providing meaningful experimental results which is excellent but give some more valid reasons and strong evidences to support your discussion.

## **Verdict:**

Although experimental results and analysis need some improvements but overall flow of the report is good and can be understand. So the verdict of this report is acceptable.

## **Note:**

You must provide some discussions on future work.
